Partner with JoyeGroup to enhance your technology strategy

IT Leadership Page

Tagline/Intro

(needs this – similar length to blurb on header – make it why they'd care. Talk about both areas.)

IT Leadership

(we'll refine this section. It starts with 'help you define', so each bullet needs to finish that sentence or we need to change how we start the bulleted list)

JoyeGroup IT Leaders can help you define:

- IT organizational chart to clearly define roles and responsibilities
- IT succession planning to ensure your organization is not crippled if someone leaves IT
- To better communicate and manage your projects, establish a Project Management Organization (PMO)
- Define and document a Project Management Methodology to ensure your projects are consistently executed
- Define System Documentation standards to ensure systems and updates are documented to make future updates more efficient and less costly
- If your organization encounters an unexpected disaster, a Disaster recovery Business Continuity Plans will help recovery
- If information is lost or corrupted in computer systems, a Solid backup process will be provided and it will be tested on a consistent basis

(It would make sense to include some success snippets here.)

CIO Services

Your company may only need part time or short term assistance in CIO services. We can provide that assistance.

JoyeGroup CIO services can help your organization:

- Define the mission of the Information Technology (IT) department to be an enabler to your business
- Define the IT Strategic Plan to meet Company objectives
- Successfully organize and manage your IT organization

A CIO ensures that information technology is an Enabler for the business and should tightly couple with the company's strategic plan and leadership.

(It would make sense to include some success snippets here.)

Cyber Security and Information Assurance

Tagline/Intro

(needs more dynamic opening statement. Something like, "Are you looking to beef up your Cyber Security, but worry about it becoming a black hole expense? Partnered with JoyeGroup protecting your company can be done in a cost-effective manner" ← still not great, but closer to what we want)

Many company executives view Cyber Security and Information Assurance are a "black hole" and an increasing expense to their company. News articles about intrusions into Government and Corporate systems are a consistent occurrence. We at JoyeGroup have stated "It is not IF but When a company has a security breach". This is a scary statement, but your company must be proactive in this fight. Cyber criminals and hostile governments are actively attempting to penetrate your systems and steal critical information and/or disrupt your operations. You must be diligent and invest in this work.

Body

Why you may need JoyeGroup Cyber Security and Information Assurance Services?

- State and Federal Laws exist that require your organizations to report security breaches
 - Does your organization know if it has not been breached? JoyeGroup can perform an audit to determine if you have been breached.
- A JoyeGroup performed security assessment will identify security positives and improvements needed for your organization to be more secure and protected. The documented improvement recommendations will help your "security posture" and delay a security breach.
- JoyeGroup can help perform remediation from the assessment results to improve your companies "security posture"
- Does your company have cyber security liability insurance? JoyeGroup can help you obtain it.

- JoyeGroup assessment and remediation work can help ensure your company reduces its exposure to a security breach

(Success stories can go here. I recommend a different intro to the list above. Something more like, "Is your company safe? JoyeGroup can help you consider:" and then reworking the bullets to end that sentence.)

Project Management

Intro/Tagline

(need this – preferably no more than 3-4 sentences)

Body

Your organization will benefit with:

- clearly documented project requirements to ensure requirements are pursued and met
- provide focus for your project to be completed
- clearly communicate the needed talent and skills to complete the project
- produce a project schedule to manage time, cost, and scope
- produce consistent project communication updates to you and your executive team
- produce needed deliverables to demonstrate progress
 - Deliverable examples:
 - Status Reporting
 - Project Charter
 - Scope
 - Project Plan
 - Product Design Documents
 - Product or process development
 - Training materials

- Documentation
 - Test plan and results
 - Implementation Plan
- communicate project closure to you when requirements are met

A JoyeGroup PM will ensure your project is planned, managed, developed, and delivered to complete the project effectively and efficiently.

Subject Matter Experts

Tagline/Intro

As you engage in IT projects, talents and skills are necessary for projects to succeed.

(ought to be a little more robust)

Body

JoyeGroup can provides experts the following important areas:

- Requirement managers
- System and Business Analysts
- Developers
- Cyber Security Experts
- Test Managers
- Trainers
- Disaster Recovery and Contingency Planning

(success statements here if you have them)

About

Process

(need a headline for this – something about how JoyeGroup's proven methodology drives client success)

Projects will have better success at your company by proceeding through phases defined and directed by JoyeGroup. This is important because it ensures that:

- your requirements (what needs to be done defined by you) are documented and satisfied
- what is produced is tested to ensure your requirements are satisfied
- deliverables are produced for your project as phases are completed. If your project phase results are not achieved, as a team we will review the results and determine if the project proceeds. Stopping a project is an option to protect your investment.

Project Phases that may be used for your project:-

- 1. Plan
- 2. Design
- 3. Build
- 4. Test
- 5. Implement
- 6. Post Implement

(striking the above as it doesn't seem different enough from a generic project process to be spelled out. If your phases are different or more complex and you really want them, think about including a sentence about each)

Our process methodology has been approved by the State of South Carolina.

Mission Statement

"To assist organizations in planning and delivering technology solutions to protect information, provide information for better business decisions, and improve our Customer's profits"

Our clients are able to be more efficient and more profitable by harnessing the power of technology, partnered with JoyeGroup.
